SOTATEK

CURRICULUM VITAE

Contact Information

Name: Neil Nguyen

Address: Xuan Dinh, Bac Tu Liem, Hanoi, Vietnam

Summary

- About 5+ years of experience in software development
- Experienced with JavaScript, TypeScript, ReactJS/Redux, NextJS, VueJS/Vuex
- Experienced with single-page application by using ReactJS, VueJS framework, Angular framework
- Experienced in Web Page Design by using HTML5, CSS3
- Experienced with deploying, using databases like MySQL
- Experiential at RESTful Web Service implementation
- Hard-working and responsible for the tasks, and careful at work
- Good self-studying skills, proactive thinking
- Self-motivated, positive attitude, strong work ethic
- Basic English communication skills, Good at reading/writing documents in English

Technical Skills and Knowledge

Technical skills	Experience	Seniority Level			
		Junior	Mid-level	Senior	Expert
Programming languages					
HTML5/CSS3	5 years			✔	
Javascript/Typescript	5 years		✔		
Java	1 year	✔			

Frontend					
ReactJS/Redux	5 years			✔	
React Native	1 year	✔			
NextJs	3 years		✔		
Angular	3 years		✔		
VueJs/VueX/Vue2/Vue3	2 years	✔			
TailwindCSS	3 years		✔		
Backend					
NestJs	1 year	✔			
Database					
MySQL	1 year	✔			
SQL Server	1 year	✔			
MongoDB	1year	✔			
DevOps					
Docker	2 years		✔		
Kubernetes	1 year	✔			
CICD	2 years		✔		
AWS	1 year	✔			
Tools & Others					
Github/Gitlab	3 years			✔	
Writing scripts	3 years		✔		
Project Management Methodologies					
Agile/Scrum	5 years		✔		

Experience

1. Sotatek - FrontEnd Developer (Apr 2022 - Present)
2. VMO Holdings - Frontend Developer (Jan 2021 - Apr 2022)
3. ITSOL Company - Frontend Developer (Apr 2019 - Dec 2020)

Projects (2019 - Present)

Project	**Retail Banking Web**
Team size	15
Position	Frontend Developer
Responsibilities	- Developed and optimized modular widgets for essential banking services, such as opening deposits and viewing transaction history. - Integrated with backend APIs to fetch and display customer financial data securely and efficiently. - Worked collaboratively with cross-functional teams to deliver features on tight schedules while ensuring high-quality code. - Manage source code on GitLab. - Research and find solutions for complex tasks and problems.
Description	- Designed and implemented core features for retail banking applications, including money transfer, savings deposit, account lookup, and customer transactions. - Improved the user experience for online banking by creating intuitive and responsive widgets using Angular 10.
Technologies used	- Angular 10, Backbase, HTML, CSS, JavaScript, TypeScript - Unit testing/Integration testing: Jest

Project	SeaNet Ebank business customers
Team size	20
Position	Frontend Developer
Responsibilities	- Designed and developed robust banking functions, enabling users to perform secure and efficient financial transactions. - Led UI/UX enhancements to make the app **25% more user-friendly**, reducing customer complaints. - Collaborated with backend engineers to debug and improve transaction accuracy and reliability. - Delivered a fully responsive application, ensuring compatibility across all devices and browsers.
Description	- Built business banking utilities, including transaction templates, card statement views, and bill payment systems, providing seamless online banking for domestic and foreign transfers.
Technologies used	- Angular 8, Bootstrap 4, HTML, CSS, TypeScript

Project	State Treasury – SeABank
Team size	15
Position	Frontend Developer
Responsibilities	- Designed and implemented key functionalities for paying taxes and administrative penalties, improving transaction efficiency. - Built robust forms for creating, editing, and printing tax returns and administrative sanctions, enhancing user productivity. - Improved system responsiveness and functionality, reducing **error rates by 20%**.
Description	- Developed a comprehensive web page to manage tax payments and administrative fines for state banking systems. - Provided features for users to check, compare, transfer, and verify transactions seamlessly.

Technologies used	- Programming language: TypeScript - Technologies & frameworks: Angular 8, Bootstrap 4, GitHub, JavaScript, TypeScript - Development tools: Visual Studio Code - Source code control tools: Git

Project	**HRSB – SeABank**
Team size	20
Position	Frontend Developer
Responsibilities	- Built and enhanced the shift management module, enabling the creation and adjustment of employee work shifts. - Designed and developed functionalities for monthly shift registrations, allowing seamless approval processes for employee requests. - Created a leave function to handle applications and approvals, ensuring accuracy and transparency. - Optimized codebase, achieving **30% better performance** in loading and handling complex employee data.
Description	- Developed an advanced attendance and shift management system for employees.
Technologies used	- Programming language: Typescript - Technologies & frameworks: Angular 8, Bootstrap 4, GitHub, JavaScript, TypeScript - Development tools: Visual Studio Code - Source code control tools: Git

Project	**Toomic – Bridge**
Team size	10
Position	Frontend Developer
Responsibilities	- Collaborated closely with Business Analysts (BA) to validate requirements and clarify business use cases.

	- Paired with backend teams to develop and integrate API connections - Partnered with QA teams to identify and resolve critical issues, improving product stability and user satisfaction. - Implement UI - Unit testing and fixing bugs
Description	- Build TOON, NFT - Designed a blockchain-based application for NFT token transfer transactions between multiple networks.
Technologies used	- Hardware environment: Linux - Programming language: TypeScript - Technologies & frameworks: React.js, Material-UI, TypeScript, Redux, Tailwind CSS - Development tools: Visual Studio Code - Source code control tools: GitHub

Project	**CMS - Wesang Korea**
Team size	5
Position	Frontend Developer
Description	- Developed a Commerce Management System to manage categories, events (swimlanes), and schedules for a food ordering application in South Korea. - Enabled administrators to handle promotional content and operational schedules efficiently.
Responsibilities	- Built user-friendly interfaces for managing categories and event swimlanes. - Enhanced schedule management features, ensuring real-time updates between the CMS and user-facing app. - Collaborated with backend engineers to integrate APIs for consistent data synchronization. - Ensured code quality through robust testing and adherence to front-end best practices.
Technologies	- ReactJS, NextJS, MUI, TypeScript, Tailwind CSS, Axios, React-query, Redux Toolkit

Project	Payment Management System (PMS) for Yogyo
Team size	5
Position	Frontend Developer
Description	- Designed and implemented a Payment Management System (PMS) to handle bill reconciliation and discrepancy detection between Yogyo's internal data and third-party Payment Gateways (PGs) such as Payco and KakaoPay. - Supported the accounting team in managing payment settlements efficiently.
Responsibilities	- Developed user interfaces for displaying billing and reconciliation records. - Implemented data visualization tools to highlight mismatches and assist in resolving discrepancies. - Worked with backend teams to integrate secure and reliable APIs for seamless data communication. - Ensured responsive and optimized UI components for a better user experience.
Technologies used	- NextJS, ReactJS, MUI, Tailwind CSS, Axios, React query, Redux toolkit

Project	Prediction Market
Team size	20
Position	Frontend Leader
Description	- Built a decentralized prediction market system allowing users to trade on the outcomes of various events, inspired by PolyMarket. - Implemented user registration using Ronin Waypoint for decentralized access to the system.

	- Supported user interaction through Ronin Waypoint integration and enabled transactions using Conditional Tokens on EVM-based blockchains.
Responsibilities	- Developed components for trading functionality, including buy/sell actions and portfolio management (P&L tracking). - Built UI for deposit/withdrawal management, supporting USDC and USDT currencies. - Integrated with Polygon blockchain for processing transactions, and prepared the architecture to support Ethereum and Binance Smart Chain in future phases. - Developed functionality for selling and redeeming shares, allowing users to manage LP tokens efficiently. - Contributed to the staking system, enabling staking for LP tokens and other ERC20 tokens to create an open ecosystem. - Worked with backend and blockchain developers to interact with AMM and ensure smooth smart contract integration.
Technologies used	- ReactJS, NextJS, MUI, Tailwind CSS, TypeScript, Redux, Web3.js, Ronin Waypoint

Project	**Picasodocs - Korean**
Team size	10
Position	Frontend Developer
Description	- Web-based application (Web2) with **User** and **Admin** portals. - Initially designed for token issuance, airdrop, distribution, and staking on the **Optimism** network. - Supports multi-language for 15+ countries with plans for further expansion.
Responsibilities	- Developed and maintained **User** and **Admin** interfaces. - Implemented token distribution, staking, and user engagement features. - Integrated multi-language support for 15+ countries.

	- Ensured scalability and maintainability of the platform.
Technologies used	- ReactJS, Axios, Tailwind CSS, TypeScript, Zustand

Project	**Ecojardin - Korean**
Team size	6
Position	Frontend Developer
Description	- Developed a website for **Eco Jardin** to showcase products and services, including spa, makeup, booking, and education. - Highlighted brand identity, service areas, and philosophy. - Implemented appointment booking via Gmail. - Provided an **Admin** portal for service and booking management. - **User/Client** portal supports **English** and **Korean** languages.
Responsibilities	- Built responsive **User** and **Admin** interfaces. - Integrated Gmail-based appointment booking system. - Developed multi-language support (English & Korean) for the user portal. - Managed product, service, and booking data in the admin panel. - Ensured SEO optimization and smooth user experience across devices.
Technologies used	- ReactJS, NextJS(v15), Turborepo, Axios, Tailwind CSS, TypeScript, Zustand

Project	Smiletoon - comics
Team size	10
Position	Frontend Developer
Description	- Developed an **online reading platform** for web-based comic/novel access. - Integrated **payment** and **membership** features for premium content access. - Supported **multi-language** to reach a broader audience. - Built an **Admin portal** for marketing management, story publishing, and operations. - Added **AI story generation** feature to create new stories automatically.
Responsibilities	- Designed and implemented **User portal** with reading, payment, and membership capabilities. - Developed and integrated secure **payment gateway** and **membership management** system. - Implemented **multi-language** support for international users. - Created **Admin portal** to: ● Manage marketing campaigns and content promotion. ● Publish, update, schedule, or remove stories. - Integrated **AI storytelling module** to generate new story content automatically.
Technologies used	- ReactJS, NextJS(v15), Axios, Redux toolkit, Tailwind CSS, TypeScript

Education

Graduated with honors – FPT Polytechnic

Language Skills

Vietnamese: Native language

English: Good at reading/writing documents
